## Projects

**Project Name:** Portfolio Website

**Summary:** Personal Portfolio Website using HTML, CSS and Django.

This website is a professional website that provides information about what I do, the services that I offer and how to contact me. It hosts the details of my academic and professional qualifications along with my web development skills and projects that I have done.

This website is made using technologies like HTML, CSS, Bootstrap for the frontend part and Django for the backend part with sqlite database.

**Role:** Developed, tested the functionality

**Project Type:** Personal Project

### **Project Details:**

=> The requirement was to create a personal portfolio website to show all the projects I have done and show off my skills in detail.

=====

**Project Name:** E-Commerce Website

**Summary:** Full-Stack E-Commerce Website using REACT and Django.

This E-commerce project helps businesses to have an online presence by providing customers with their services over web such as accepting the orders, payments, manage logistics and shipping. A complete user authentication and authorization system is implemented to register and login into the website using JSON web Tokens(JWT) and select items and send to cart along with payment gateway. Used React bootstrap for making the UI of the website and React Redux library for the state management of the website and django RESTApi for the backend.

**Role:** Developed, tested the functionality

**Project Type:** Personal Project

### **Project Details:**

=> The requirement was to create an e-commerce website to host products from sellers and use digital methods to sell them to potential buyers.

=====

**Project Name:** Study Room Website

**Summary:** Full-Stack Study Room Website using REACT and Django.

This is a communications website that lets the user share text chat with other users of the study rooms. The structure of the website is that there are certain topics created by the admin and then any user can create a room on one or more than one of those topics and he/she gets to be the host of that study room where people interested in that topic can join the room to chat by posting questions and answers and share their ideas and improve their knowledge by clearing their doubts in that topic. A complete user authentication system is implemented to register and login into the website.

**Role:** Developed, tested the functionality

**Project Type:** Personal Project

**Project Details:**

=> The requirement was to create a study room website where students can interact through chat messages and get their doubts cleared about any subject/topic.

=====

**Project Name:** NEWS Website

**Summary:** News Website using REACT Library and Django.

This website shows news articles on various topics like sports, business, science and technology and many more from all around the world using news API. Also implemented with user authentication to register and login into the website. Note taking feature is added so that user can copy paste articles into his notes on the same website while reading the news articles.

**Role:** Developed, tested the functionality

**Project Type:** Personal Project

**Project Details:**

=> The requirement was to create a news website along with note taking feature to show news articles and a user can copy paste useful information for future reference.

**Declaration:**

I hereby declare that the above particulars furnished by me are true to the best of my knowledge and belief. I assure you, if I am given a chance, I will execute my work to the fullest satisfaction of my Superiors.

Date:

Place : Bengaluru.

Yours Sincerely,  
M Sridhar Reddy
